

# **Technical Data Sheet**

# EPIKURE™ Curing Agent 3164

### **Product Description**

EPIKURE™ Curing Agent 3164 is a proprietary oligomeric polyamine curing agent for structural applications. Epoxy resins cured with EPIKURE Curing Agent 3164 can produce films, castings, or adhesive joints with a high degree of toughness and flexibility.

#### **Benefits**

- · Imparts highly flexible properties
- Improved toughness compared to conventional polyamines
- Improved combinations of elongation, strength, modulus, abrasion resistance, and tear resistance in comparison with those given by other "flexibilizing" curing agents
- Strong low temperature properties of cured formulations
- · Good adhesion to a variety of substrates
- · Resistant to surface blush and amine exudates
- Useful as formulating tool in blending with other curing agents to impart desired properties

### Sales Specifications

Property	Value	Unit	Test Method
Amine Value	230 - 250	mg/g	ASTMD2896
Color	12	Gardner	ASTMD1544
Viscosity at 25°C	7000 - 11000	cР	ASTMD2196

# **Typical Properties**

Property	Value	Unit	Test Method
Density	8.2	lbs/gal	ASTMD1475
Equivalent Weight	256	AHEW	
Flash Point, Setaflash	>200	°F

#### **General Information**

EPIKURE Curing Agent 3164 is a proprietary oligomeric polyamine curing agent designed for use with epoxy resins to produce films, castings or adhesive joints with a high degree of toughness and flexibility. It is supplied as a solvent-free liquid.

The superior toughness and flexibility provided by EPIKURE Curing Agent 3164 in comparison with standard "polyamide" curing agents such as EPIKURE Curing Agent 3125, as well as a selection of other curing agents for "flexible" or "toughened" epoxy systems, is apparent from a comparison of Tables 1 and 2. This toughness and flexibility is achievable over a wide stoichiometric range. Some chemical resistance data for systems cured with EPIKURE Curing Agent 3164 are also shown in Table 2.
